## COMPLETE INDEX

*Pages 158, 159 and 160*

We have made large plantings this year but still some varieties are in short supply. It is a wise gardener who orders his seeds early.

*David Burpee with the new Tetra Marigold, the first new flower created by the use of a chemical—colchicine. Tetra Marigold is what is known scientifically as a tetraploid.*

For over 63 years Burpee has been supplying gardeners everywhere with their seed requirements and each year we strive to render better service. We want your garden, planted with Burpee's Seeds, to be an outstanding success. On our Seed Farms, varieties are selected and reselected, year after year, to give you the best that it is possible to produce.

Thousands and thousands of dollars are spent annually by us in research, experimenting, breeding and testing, so that you may receive seeds of the highest quality and vitality. And yet these seeds, Burpee's Seeds, cost no more than ordinary seeds. A few cents will buy a packet of flower seeds which will not only beautify your home surroundings but provide cut flowers for indoor decoration, and for very little money you can get a handful of seeds which will produce a garden full of vegetables. Where else can you buy so much of quality for so little! If you have not grown vegetables before, you don't know their real flavor. No vegetable can compare in flavor with those gathered in your own garden and cooked with as little delay as possible. What about your lawn? Is it well kept? Does it lend an air of distinction and refinement to your property? Burpee's Grass Seeds, special blends for different purposes, are clean, heavy and of the highest quality.

There are many new varieties of flowers and vegetables in this catalog. A new tomato for which we will pay \$100 for a name is offered on page 97; on the same page we list the new Fordhook Pepper, Bronze Medal Winner in the All-America Selections for 1940. Read about the New David Burpee Zinnias on page 4; Tetra Marigold on page 8—the first new flower created by the use of a chemical; Cream Star Petunia, page 3, Silver Medal, All-America Winner for 1940, and many other marvelous new Burpee introductions for your garden will be found throughout this Book.

For the Best Seeds that Grow, whether it be the good old standbys or entirely new varieties, you can depend upon Burpee. We would greatly appreciate your order. May we hear from you soon?

Faithfully yours,

*David Burpee*

## Burpee's Experimental Grounds and Famous Seed Farms

At Burpee's Fordhook Farms, near Philadelphia, and Floradale Seed Farms, Lompoc, California, a vast amount of experimental work is carried on each year to improve existing varieties of vegetables and flowers and to create new ones. Pages could be written of the work we have accomplished.

On Fordhook Farms many special strains are produced, in addition to which a large acreage is utilized mostly for growing, testing and insuring the trueness-to-type of all the seeds we send out.

At Floradale Farms plants grow to perfection under ideal climatic conditions—mild winters and long, cool, dry summers are favorable for the production of the Best Seeds that Grow. Here, too, is carried on an intensive breeding program as well as much experimental work—all to give you seeds of the Highest Quality and Vitality.

Burpee's Seeds are grown where conditions are most favorable for producing the best seeds. They will grow to perfection wherever they are sown. # Burpee's New Dwarf Compact Petunia

## 2426 Cream Star

*Silver Medal Winner, All-America Selections for 1940*

Plants have the finest dwarf, bushy habit ever seen in the nana compacta group of petunias. When full grown, they are 12 in. high and 14 in. across, neatly rounded and completely covered with flowers over the sides and top. Perfectly uniform; every plant is of the same size and habit, and all plants produce flowers of the same color and form. Cream Star Petunia, entered in competition with many other new flowers, received the highest rating by the judges of the All-America Selections for 1940. To receive such a high honor, a flower must be good; we can fully recommend it.

Flowers grow  $2\frac{1}{4}$  in. across and are shaped like a five-pointed star; soft, creamy white deepening towards the throat to a bright golden yellow. The entirely distinct color of the flowers, together with the uniform, compact habit of the plants and their profusion of blooms, makes Cream Star Petunia ideally suited for low beds, borders and edgings. Plants come into bloom about 20 weeks after the seed is sown and they will continue to bloom profusely until frost. Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.

*Heavenly Blue Scabiosa*

# Burpee's New Scabiosa

Flowers are round, soft azure-blue, and borne most profusely on long, strong stems well above the foliage. Blooms from midsummer until frost if flowers are not allowed to go to seed. Pretty in beds and borders; highly prized for cutting.

# 2878 David Burpee Zinnias

*Surpass all other zinnias in size, form, and assortment of colors*

David Burpee Zinnias represent the greatest advance in large-flowered zinnias since the introduction of the Dahlia-flowered type twenty-five years ago. The flowers are of a form never before seen in zinnias; they may be likened to a large-flowered chrysanthemum, so attractively curled and quilled are the petals. The petals curl backwards so that only the colorful upper side is exposed and the dull underside is entirely hidden.

The size of the flowers is tremendous, and not only are they extremely broad, but they have a depth which is not found in any of the other large-flowered forms. Flowers measure up to 6 in. across and from 4 to 5 in. in depth, with cutting stems averaging 18 in. in length. The quilled form of the flowers makes them exceptionally good keepers, and they will last in good condition for well over a week in water when cut.

Another outstanding feature of these zinnias is the unusual range of colors, many that have never been seen in zinnias before. Pastel shades predominate, such as apricot, soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are delightful combinations of exquisite blendings of two and three colors. Some of the colors are shown on the front cover of this catalog.

The plants grow about 3 ft. tall and are different from those of any other zinnia. The seed grows

*The men on the Floradale Seed Farms thought so much of this new kind of zinnia that they insisted on naming it for the president of this Company. He and the zinnias are shown above.*

just as well as any, but the plants in the young stage are a little slow in getting started. Once, however, they get their roots well into the ground, they make a most amazing growth—more vigorous and taller than most zinnias. Some of the plants have leaves which are curiously curled and quilled like the petals of the flowers. The plants with the most extremely curled leaves usually bear the most attractively formed flowers. Those with the plain leaves bear flowers which are not so extremely quilled as the others, but are large and beautiful. The color of the foliage is of a deep, rich green and is somewhat mildew resistant.

These zinnias have a fine pedigree. They are a development out of Luther Burbank's Zinnias, the result of a mutation which occurred several years after Mr. Burbank's death. Their size, shape and wide range of soft delicate pastel colors that you never dreamed could be found in this popular garden flower make them most desirable for garden use and cutting.

# New Tetra Marigold

## 2193 Tetra Marigold

The first flower produced by the use of chemicals. Tetra is what is known as a Tetraploid Marigold.

Colchicine, the powerful chemical made from the fall crocus, was applied to Guinea Gold Marigold. It caused the doubling up of the cell contents and this new marigold consequently is extremely big and strong growing. It is a "Tetraploid."

Flowers are large, 4 in. across, deep golden orange, and freely borne on plants that are much more robust than other marigolds. The main stems are exceptionally thick and heavy; plants grow 2½ ft. tall and have the usual marigold odor.

Its robust growth and heavy, dark green foliage make Tetra Marigold especially suited for borders and bedding. Tetra is a flower of most artistic form; nice for cutting.

175 seeds 50¢; 400 seeds \$1.00.

## New Yellow Colossal ← Calendula

In addition to being the biggest calendula in the world, Yellow Colossal is the most profuse blooming of all large flowered varieties. The beautiful, clear, bright yellow flowers grow 4½ in. across.

The well-formed, bushy plants grow 18 in. high and are loaded with flowers so that it is most suitable for use as a bedding variety. Showy in the garden and especially desirable for cutting.

Yellow Colossal is bigger and better than Sunshine — the flowers are larger, more fully double, more compact and of better form; the outer petals are long, loose and gracefully curved.

Pkt. (100 seeds) 25¢;  
225 seeds 50¢; 500 seeds \$1.00.

### 2323 New Giant Double Nasturtium Fiesta

A gayly colored big nasturtium. When young, the flowers are bright golden yellow blotched scarlet at base of petals; as they age, the scarlet suffuses over the face of the flower. This variance in coloring is most striking and changes considerably in different flowers on the same plant at the same time.

Flowers are semi-double,  $2\frac{1}{4}$  in. across, and are borne profusely on long, strong stems high above the foliage. Their long stems and sweet fragrance make them highly prized for cutting. Plants are of strong, vigorous growth, 15 in. high, and spreading about 3 ft. across. Splendid for beds and wide borders.

Pkt. 25¢; 2 pkts. 45¢.

### 2426 New Dwarf Bedding Petunia Cream Star

Entirely distinct in both color and form of flowers. The plants grow 12 in. high and 14 in. across, are neatly rounded and completely covered with flowers,  $2\frac{1}{4}$  in. across, and shaped like a five-pointed star. Ideal for low beds, borders and edgings. Pkt. 25¢; 2 pkts. 45¢.

### 2065 New Double California Poppy Sweetheart

Flowers are double, 2 in. across, with petals beautifully crinkled and fluted. Plants are bushy, dwarf, erect, 8 in. high and 15 in. across. Fine for beds and borders. Pkt. 20¢; 2 pkts. 35¢.

New Larkspur, Glitters

*Tetra Marigold (top) in comparison with Guinea Gold (below)*

## New Giant Marigold 2193 Tetra

Tetra Marigold is the first flower to be produced for cultivation which was developed by doubling the chromosome number through artificial means. This was done by using a drug known as colchicine. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra."

The flowers of Tetra have the same attractive carnation-flowered form as Guinea Gold, but are much larger,  $3\frac{1}{2}$  to 4 in. across, and of a very deep orange color. The petals are frilly and possess unusually heavy substance so that the flowers have excellent keeping qualities. Some idea of the size of Tetra in comparison with Guinea Gold may be had by looking at the picture to the left.

Plants grow 2 to  $2\frac{1}{2}$  ft. tall and have much greater vigor than other marigolds. The main trunk and branches are very thick and heavy; the leaves are broad and leathery. The flowers are borne profusely over the top of the upright plants. Many of the branches have a cluster of 6 or 8 flowers at the end so that a single branch when picked would make a bouquet. Showy in beds and borders; wonderful for cutting.

Tetra begins blooming in about 19 weeks from seed. If you wish to have a long season of bloom, we suggest that you start seeds early indoors. Tetra is as easy to grow as any marigold; don't miss this distinctly new variety.

Pkt. (75 seeds) 25¢; 175 seeds 50¢;  
400 seeds \$1.00.

## Giant Pacific Delphiniums

Tall, slender, graceful flower spikes of very large and well-formed florets. Many of the plants are highly resistant to mildew. Fine for cutting; valuable in perennial beds, tall borders or backgrounds. 4 to 5 ft. high.

**4092 King Arthur Series** Flowers are large, up to  $2\frac{3}{4}$  in. across; deep blue and blue-violet tones with prominent white centers, which makes them most attractive.

**4094 Lavender Shades** Beautiful light lavender-blues and pure lavender shades with white "bee." Strong spikes.

**4093 Summer Skies Series** Very large flowers of clean, pure, pleasing shades of azure blue, light and deep sky blue. Soft and refined. One of the most pleasing.

**4095 Dark Violet Shades** As the name implies, the large flowers are of the dark violet shades with both light and dark "bees." Double flowers of good form.

## New Dwarf Double California Poppy

### 2065 Sweetheart

New color and distinct plant habit in Eschscholtzias. Flowers are extremely double, 2 in. across, with petals so beautifully crinkled and fluted as to give them the appearance of double begonias. The color is a most gorgeous, flaming, rich rose on cream ground, lighter on the inside of the petals than the outside, so that many attractive bicolor effects are produced. Plants are bushy, dwarf and somewhat erect, 8 in. high and 15 in. across, with none of the branches showing any tendency to trail or break apart. They are most rugged and free blooming. Flowers completely cover the plants over a very long period of time. Marvelous plant habit, pretty flower form and pleasing color all combine to make Sweetheart one of the best California Poppies.

# 2271 Burpee's Red and Gold Hybrids

## Hybrids Between African and French Marigolds

### *Created on Burpee's Floradale Seed Farms*

The flowers of Burpee's Red and Gold Hybrids grow 2½ to 3 in. across. Some are solid red with a brilliance never before seen in marigolds; others are delightful combinations of red and gold. The flowers vary in color according to season and even in different flowers on the same plant at the same time. At times they are almost pure golden-yellow and at other times mahogany-scarlet.

Burpee's Red and Gold Hybrids are the liveliest colored and most outstanding of all marigolds. They are extremely double and nearly three times the size of the largest double French Marigold. They are the earliest of all marigolds, as they come into bloom in less than eight weeks from seed. The plants are more profuse blooming and will continue to flower over a longer period of time than any other marigold; in fact, they have flowered continuously for more than seven months in the open garden. Grow 1½ ft. tall, 2 ft. wide.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color will appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems.

## Chrysanthemum Flowered

They are borne singly or in clusters of 2 or 3 on the ends of long branches. The strong, vigorous plants have a neat, upright, bushy habit of growth, 24 in. tall and 20 in. wide; begin blooming in 15 weeks and continue profusely until frost. **Pkt. 20¢; 1/8 oz. 60¢; 1/4 oz. \$1.00.**

**2311 Orange Delight** An extremely deep orange, the deepest coloring known in African Marigolds. Flowers are round, pompon-like, and are made up of a multitude of attractively curled and interlaced petals. The blooms grow 2 1/2 in. or more across, the first ones appearing in about 20 weeks after seed is sown. Plants grow 3 ft. high. Start seed indoors. **Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.**

Blooms are had in 15 weeks from the time the seed is sown, so that even in the most northern states, where summers are short, Early Sunshine will provide great numbers of flowers for many weeks. Plants grow 2 ft. tall and produce their cheerful, bright lemon-yellow flowers most profusely. **Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.**

**2221 Dixie Sunshine** Clear, bright yellow, long-stemmed double flowers, about 2 1/2 in. across, composed of small, five-pointed florets that are interlaced in such a manner as to give them the appearance of a pompon chrysanthemum. # Marigolds—continued

A wealth of color in late summer and fall unequalled by any other flower. Easy to grow in ordinary garden loam and a sunny location. Remarkable diversity of habit and size of flowers; each class has its own particular place in the garden. Lovely for cutting, the flowers keeping in fine condition for a long time.

## Carnation Flowered

**2295 Golden West** Earlier blooming, larger flowered, dwarfier growing, and more floriferous than Guinea Gold. Plants start to bloom in 15 weeks after seed is sown. Flowers grow 3 1/2 in. or more across, with petals loosely and gracefully placed. Plants grow 2 1/2 ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with deep orange flowers until killed by frost. Much like Burpee Gold marigold except that Golden West has foliage with the usual marigold odor. Its earliness will be especially appreciated in sections where seasons are short. Long-keeping cut flower. **Pkt. 15¢; 1/8 oz. 35¢; 1/4 oz. 60¢.**

**2294 Burpee Gold** Earlier blooming, larger flowered, dwarfier growing, with more flowers than Guinea Gold, and, above all, **foliage is entirely free of the usual marigold odor.** Glorious deep orange double blooms, 3 1/2 in. across, with the long petals loosely and artistically arranged. ## Hedge or Border Marigold

**2307 Spanish Gold** A new and distinct habit of growth in marigolds called "Hedge or Border"—every plant is identical in habit, height, breadth, extremely bushy, with a flat top and straight sides so that a row of these plants gives the appearance of a neatly trimmed hedge, 20 in. high and 30 in. wide. When in full bloom, the entire top and sides of the plants are covered with deep glowing golden orange flowers, which grow 3 in. across and somewhat resemble carnations but differ in that the petals are delightfully ruffled and slightly fluted. Flower stems are long and ideal for cutting. Blooms in 20 weeks from seed and continues to flower profusely until frost. and Royal Crown.**

**7670** One pkt. each (5 pkts. in all, value 85¢) for only **50¢**

### 2294 Burpee Gold

Earlier blooming, larger flowered, dwarfer growing and more floriferous than Guinea Gold, and, above all, entirely free of the usual marigold foliage odor. Glorious deep orange double blooms, 3½ in. across, with the long petals loosely and artistically arranged. Plants grow 2½ ft. tall, begin blooming in 15 weeks, and continue most profusely until frost.

**Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

### 2309 Golden Gate

Early-blooming chrysanthemum-flowered marigold with odorless foliage. Bright golden-yellow flowers, 2½ in. across, are borne in clusters of from 3 to 5 on the ends of long stems. Plants grow quite erect, 26 in. high, beginning to bloom in about 17 weeks after seed is sown.

**Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

### 2303 Silver Crown

The form of the flowers differs somewhat from our other collarette marigolds in that the petals of the collar are narrow and attractively waved. This collar and the ball-shaped crest of hundreds of curled and interlaced petals are of the same soft and pleasing shade of primrose-buff—a distinct color not heretofore seen in marigolds. Foliage is entirely odorless. Plants begin blooming in 14 weeks and continue until frost. 2 ft. high.

### 2272 Golden Glow

Odorless marigold with an entirely distinct form. Flowers are bright, sharp, golden-yellow and resemble in color and appearance those of the familiar Golden Glow Rudbeckia. In general form, flowers are somewhat like the chrysanthemum-flowered types but petals are straight, sharply pointed and lie rather flat instead of curling and interlacing. Flowers grow about 2½ in. across and are borne in clusters of from 5 to 10 on the ends of heavy branches so that only a few branches are needed to make a large and artistic bouquet. Plants grow 2 ft. tall; begin to bloom in 17 weeks from seed and continue till frost. **Pkt. 25¢; ⅛ oz. 70¢; ¼ oz. \$1.25.**

# CALENDULAS—Scotch or Pot Marigolds

*Calendula,  
Orange  
Fantasy*

It is marvelous to see how plant breeders have improved the old-fashioned calendula that was grown generations ago. The beautiful varieties offered on this page, except where noted, are extra large-flowered and double to the very center. Where summers are not too hot, plants will bloom from early summer until frost, and furnish an endless supply of long-lasting cut flowers. Calendulas are of easiest culture, succeeding in ordinary well-drained soil. Sow any time during the spring and early summer. 15 to 24 in. tall, depending on the variety.

# BURPEE'S EXQUISITE PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in soil that is overly rich.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

# Giant Ruffled Petunias

(*Petunia hybrida*

*grandiflora superbissima*)

**Burpee's Giant Ruffled Petunias** are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined, and, when well grown, often measure 5 to 7 in. across. They are ready sellers with those who grow pot-plants for sale; marketable flowering plants can be had in four months from the time of sowing the seed. Plants bloom until frost.

Seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with equal parts of good garden loam and leaf mold to which has been added a generous quantity of fine clean sharp sand. Make sowings about eight weeks before your usual outdoor planting time. Plants may be set in the open ground where they are to remain after soil has become warm and all danger of cold weather is past. Easily grown if directions on the seed packages are carefully followed.

**2398 Camilla** Soft strawberry-pink with an elusive trace of pastel salmon. In beautiful contrast to the ground color is a rich, bright rose veining which deepens in the throat to a shining, burnished crimson-maroon. Pkt. 25¢; 1/128 oz. 75¢; 1/64 oz. \$1.25.

**2533 Copper Red** Distinct rosy copper-red with dark throat. The enormous blooms measure 5 to 7 in. in diameter. Pkt. 25¢; 1/128 oz. 75¢; 1/64 oz. \$1.25.

**2405 Copper Rose** Old rose enlivened by a decided burnished coppery cast. A netting of garnet-red veins covers the white throat and adds greatly to its beauty. Pkt. 25¢; 1/128 oz. \$1.00; 1/64 oz. \$1.75.

**2406 Copper Scarlet** Deep rosy scarlet with a distinct coppery sheen and faint blackish crimson veining. The wide throat is deep blackish mahogany. One of the finest. Pkt. 35¢; 1/128 oz. \$1.10; 1/64 oz. \$2.00.

**2397 Enchantress** Bright tyrian-rose in lovely contrast to the large, pure white throat. Striking, showy and distinct. Pkt. 25¢; 1/128 oz. \$1.00; 1/64 oz. \$1.75.

**2540 Evening Star** Glistening pure white, accentuated by the rich yellow throat, veined deeper yellow. Pkt. 35¢; 1/128 oz. \$1.10; 1/64 oz. \$2.00.

**2517 Mauve Queen** Light mauve or heliotrope on white ground; from the large, satiny black throat extend deep royal-purple veinings which become lighter and practically disappear after overlaying about one-half of the petal surface. Pkt. 25¢; 1/128 oz. \$1.00; 1/64 oz. \$1.75.

**2518 Pink Pearl** Warm rose-pink deepening to crimson toward the throat, which is heavily veined purplish mahogany. Pkt. 25¢; 1/128 oz. 75¢; 1/64 oz. \$1.25.

**2536 Portland Beauty** Deep tyrian-rose shaded carmine and heavily veined purple. Deeply lobed and beautifully waved. Pkt. 25¢; 1/128 oz. 75¢; 1/64 oz. \$1.25.

**2527 Ruffled Pink** Soft yet rich mauve-pink with purplish mahogany throat and heavy, dark veining. Very effective. Pkt. 35¢; 1/128 oz. \$1.10; 1/64 oz. \$2.00.

# Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full

sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in mid-summer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

## Giants of California

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia-flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders.

**3184 Brightness** Deep rose. A fine variety, which combines well with Golden Queen or Daffodil. Very full and of perfect form.

**3183 Cerise Queen** Beautiful flowers of a luminous cerise-rose shade. Widely grown.

**3185 Daffodil** Distinctive shade of bright canary or daffodil yellow. Exceptionally nice.

**3190 Enchantress** Light rose with a dark rose center. A truly enchanting two-toned color combination which produces a most charming effect.

**3192 Golden Queen** (Lemon Queen) Delightful shade of lemon-yellow with a distinct golden cast.

**3196 Grenadier** Rich, glowing dark red. A vivid yet unobtrusive color. Especially fine for exhibition.

**3197 Lavender Gem** Deep lavender, turning to a warm purple as the flower matures. Very artistic shade.

**3191 Miss Willmott** Lovely, delicate, yet warm, soft pink, deepening somewhat as flowers age. Pleasing shade.

**3187 Orange King** Rich cadmium or orange-scarlet flowers of remarkable brilliance, many two-toned.

**3186 Purity** Most outstanding for its pure white color and perfect finish. Splendid alone; lovely with all colors.

**3188 Rose Queen** An exquisite flower of pure, clear, rose color. Most desirable. Radiant, soft, and refined.

**3198 Salmon Queen** Salmon-rose flowers of unusual beauty; a particularly attractive zinnia for cutting.

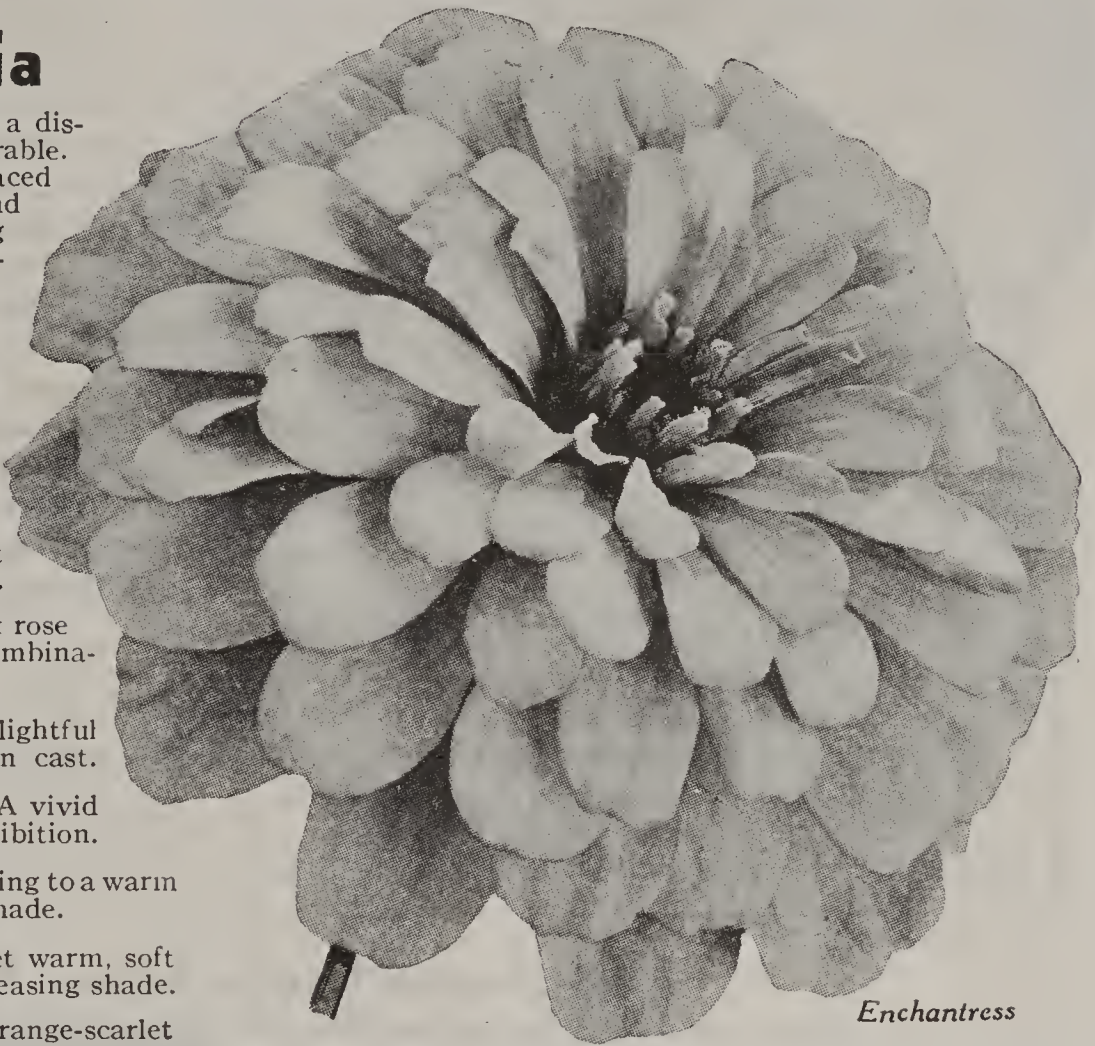

**3189 Scarlet Gem** A gem in the true sense of the word. Glowing scarlet. Very striking in solid masses.

**3199 Violet Queen** Marvelous flowers of a wonderful shade of deep purple; beautiful under artificial light.

*Any of the above separate varieties:*

**Pkt. 15¢; 1/8 oz. 30¢; 1/4 oz. 50¢; 1/2 oz. 85¢.**

**3195 All Colors Mixed** This mixture has been most carefully prepared and blended according to color values. All of the fourteen named varieties are grown separately, and the proper quantity of each is put in this special mixture so as to make a most colorful and well-balanced display. Makes a gorgeous showing when massed in large beds or borders. **Pkt. 10¢; 1/8 oz. 25¢; 1/4 oz. 40¢; 1/2 oz. 70¢.**

Ever since introduced a few years ago, Fantasy Zinnias have been great favorites with those who like something out of the ordinary and unusual. The well-rounded, medium sized double flowers, 3 to 3½ in. across, are composed of a mass of twisted, tubular petals which give them the appearance of a shaggy chrysanthemum. Plants grow about 2 ft. tall and are very profuse blooming throughout the summer and fall. **Fantasy Zinnia, Mixed Colors, and Star Dust (yellow Fantasy)** each won an All-America Award of Merit.

Navajo Zinnia

## Navajo Zinnias

The bicolor effect of each petal, being heavily tipped white, creamy white or creamy yellow for about one-third its length, is most unusual and attractive. Colors run through lilac, lavender, russet, crimson, orange, yellow, pink and other pastel shades. The many bicolored blooms remind one of the lovely, vivid colorings to be found in a Navajo rug. Bushy plants, about 1 1/2 ft. tall.

*Sensation—the largest and earliest of all cosmos*

# Cosmos

Beautiful summer and fall blooming plants; decorative in the garden and wonderful for cutting. Always popular, but more so now than ever, no doubt due to the introduction of the early midseason type a few years ago, followed by the beautiful yellow cosmos and Mammoth Sensation. Plant as many varieties as space will permit, for a garden is incomplete without this lovely flower. They are old favorites, a constant expression of friendliness, happiness, and memories. One of the easiest to grow.

## Sensation (Mammoth Flowering)

Giant flowers, 4 to 6 in. across, are had within 10 weeks from seed and are borne most profusely until frost on strong, robust plants, 4 to 6 ft. high. Flowers have prettily fluted petals which slightly overlap. They are borne on long strong stems so desirable for cutting. Larger flowers, if wanted for exhibition or other purposes, may be obtained by disbudding.

# Improved Larkspurs

One of the most beautiful and desirable **annuals** for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1½ ft. apart.

## Giant Imperial

*Grow Upright Like Delphiniums*

Attractive flower spikes, 3 to 4 ft. tall, which stand upright, close to the center stalk—a decided improvement on older types. Well-formed, large, double flowers in a wonderful range of colors.

**2142 Glitters** (*New*) Scintillating salmon-cerise; the brightest of all larkspurs. Large, double flowers fill the spikes, the laterals coming into bloom at almost the same time as the main spike, which is quite unusual. Not so tall as others and more showy. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.**

**2131 Dazzler Improved** (*New*) Deeper and brighter carmine-red than old Dazzler. Very showy. **Pkt. 15¢; 1/8 oz. 35¢; 1/4 oz. 60¢.**

**2121 Blue Bell** Clear azure-blue; lovely and desirable shade.

**2166 Dark Blue Spire** Intense Oxford-blue; most attractive.

**2165 Carmine King** Deep carmine-rose; always attracts.

**2126 Daintiness** Delicate lavender, a soft but rich tone.

**2167 Lilac Spire Improved** An appealing shade of soft lilac.

**2129 Los Angeles Improved** Luminous salmon rose.

**2157 White King** Extra large, fully double, pure white flowers, closely placed on heavy spikes a little taller than other colors.

**2153 Mixed Colors** Special mixture of the above and other varieties of the Giant Imperial larkspurs. The upright habit of growth makes them especially showy in the garden and lovely for cutting.

# BURPEE'S GLORIOUS ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

\* Varieties marked with an asterisk (\*) are the **Wilt-Resistant Strain**. They are highly immune to "Wilt disease" or "Stem-rot."

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

*Giant Branching Aster, Scarlet Rose\**

## Giant Branching

**American, Semple's or Vick's Branching**

From midsummer until frost these asters will produce a profusion of beautiful flowers. The blooms are quite large, 3½ to 4 in. across, and fully double. The plants grow 2 to 3 ft. tall and branch freely, producing stems frequently 2 ft. long, which makes this class especially fine for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give.

**1600 El Monte** Deep glowing crimson blooms composed of daintily interlaced, plume-like petals somewhat similar in form to Giants of California, but earlier and much larger. # Giant Double Nasturtiums

## Dwarf or Globe Plants

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, edgings, rock gardens and pot culture.

### 2337 Sun Ball

Flowers are soft, creamy yellow, in perfect harmony with the very dark green foliage. Plants are somewhat dwarfer, more compact and more bushy than other varieties in this group; they are very neat and free flowering. Long-stemmed, sweet-scented, large flowers.

Pkt. 25¢; 2 pkts. 45¢.  
5 pkts. \$1.00.

*New Dwarf Double Nasturtium, Sun Ball*

**2306 Delightful** Soft, salmon-cerise, the upper petals prettily marked crimson maroon at the base, and as flowers age, they often take on a deeper shade of salmon-cerise than the lower petals. Unsurpassed for cutting as the stems are exceedingly long and strong; flowers are held well above the luxuriant, bright green foliage of the neat, well-rounded, dwarf plants.

Pkt. 20¢; oz. 60¢; 4 ozs. \$1.75.

**2336 Garnet Gem** Striking color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. Flowers are double or semi-double, with 8 to 10 petals, and grow about 2½ in. across. Long stemmed and delightfully sweet scented.

Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.

**2329 Golden Globe** Exquisite, giant double and semi-double, pure golden yellow fragrant blooms of the same color and shape as Golden Gleam, but the plants are dwarf, globe-shaped and bushy. Award of Merit in the All-America Selections.

Pkt. 10¢; oz. 25¢; 4 ozs. 75¢.

*See next page for a choice assortment of semi-tall or gleam type Nasturtiums*

**2305 Orange Glory** The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Narrow lines of this latter color radiate like a fan out over the upper petals, but disappear in an overlay of orange-chrome. Petals are wonderfully fluted and crinkled. Plants are of the true dwarf or bush form.

Pkt. 20¢; oz. 60¢; 4 ozs. \$1.75.

**2348 Primrose Gem** The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers. Bushy, uniform, globe-shaped little mounds above which the flowers are borne on long, strong stems.

Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.

The new 40- to 60-petaled Super-Double Nasturtium found in Burpee's Double and Super-Double Mixture

## 2334 Burpee's Double and Super-Double Mixed Nasturtiums

**These New Hybrids** were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double, like the illustration opposite. Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*), when fully open, resemble greenhouse carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-Doubles have as many as **40 to 60 true petals**, and the double hybrids have 8 to 10. Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-Double type. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums.

**Burpee's Super-Double** is the only **Nasturtium** to be given a **Plant Patent**. Plants grown from our Double and Super-Double Mixture seed are protected by **U. S. Plant Patent No. 141**.

# Burpee's Snapdragons

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

## 1771 New Tall Giant Snapdragon, Golden Rod

Spikes stand up like rods. Bright golden yellow flowers fill the unusually thick, erect spikes. Base branching plants, 26 in. tall; most rust-resistant of all snapdragons and the most rugged. Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.

## "Majestic" Snapdragons Semi-Tall Giant-Flowered

The massive, hyacinth-like spikes are closely set with flowers as large as those of the Tall Giant (Maximum) type, offered on next page, but the plants are of semi-tall growth, 18 to 24 in. high. Ideal for beds, borders, cutting and pot culture.

**1704 Avalanche** Handsome pure white blooms well displayed on large, attractive spikes. A foremost variety.

**1873 Celestial Award of Merit, All-America Selections.** Flowers are of a beautiful salmon-rose color, large and nicely placed on the broad, compact spikes. Exquisite color, rich and glowing, yet soft and refined.

**2967 Day Dream** Lovely, distinct shade of soft rose-pink merging into light yellow at the center. Charming.

**1547 Delight** Salmon-pink shaded with apricot. Makes a fine cut flower.

**1548 Eldorado** Deep golden yellow of unusual purity. Combines remarkably well with all other varieties.

**2968 Fancy Tints** Gigantic flowers of many attractive colors, mostly autumn shades. Practically all are two-toned, some bi-colored, pencilled, tipped and blotched, while in others several colors are softly blended into the most appealing combinations. 30 to 34 in.

## Dahlias from Seed

It is easy, most interesting and fascinating to grow dahlias from seed and enjoy the surprise of new colors and forms. If the seed is started early, plants will bloom the same season. Single and small-flowered varieties reproduce fairly true to color and type, but large-flowering types will produce some singles and semi-doubles.

Burpee's Early Flowering Sweet Peas are offered on the next two pages.

# Burpee's Early Flowering Sweet Peas

*Varieties are arranged in each color class from deep to light shades*

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 64 to 69. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, and also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

## Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (*Aubrietia*), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

**Average heights and blooming season are given in the description for each class; some variation is natural in different localities.**

## Hardy Poppies

The colorful beauty of perennial poppies assures them a place in every garden. They are of easy culture, growing to perfection in fairly rich, slightly moist but well-drained soil, and in full sun. The seed is best sown where the plants are to bloom. Every garden should have both the Iceland and Oriental Poppies.

### Nudicaule—Iceland Poppies

Iceland Poppies are charming in the border or rock garden, and furnish ideal cut-flowers when picked while in bud. The plants form neat, compact tufts of bright green foliage, from which arise graceful, wiry stems bearing large flowers in brilliant colors in early summer and more or less throughout the season. Will flower the first year if seed is sown early. Often grown as an annual. 15 to 18 in.

## Hardy Garden Lilies

The glorious Regal Lily

Auratum platyphyllum

Speciosum rubrum

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

### Regal Lily (Regale)

Gorgeous, bell-shaped, white blooms with a touch of canary-yellow in the throat and a shading of lilac-pink on the outside. Blooms during July. Sweet-scented. 12 for \$2.50; 100 for \$18.00.

**8632 MEDIUM SIZED BULBS** In our advertisements we are making this special offer of medium sized Regal Lily bulbs to make new friends; we repeat the offer here so that old friends, as well as new, may take advantage of this bargain. # BURPEE'S DAHLIA ROOTS

*Jersey's Beauty*

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

**F. D. = Formal Decorative; I. D. = Informal Decorative;**  
**C = Cactus; S. C. = Semi-Cactus.**

# 1118 Burpee's New "Nameless" Tomato

## \$100 for a Name

A distinct, new, all-purpose tomato—a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which virtually hides the fruit, especially in center of plant.

The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform, and attractive. Slice Burpee's New "Nameless" Tomato and you will marvel at the structure and firmness of its interior. Flavor? As good as Marglobe, and that's a high compliment. Ready in 75 days from setting out the plants. 100 seeds 10¢; 300 seeds 25¢; 1,500 seeds \$1.00.

# 840 Burpee's New Fordhook Pepper

*All-America Bronze Medal Winner for 1940*

*New!  
Burpee's  
Fordhook  
Pepper*

In this pepper we believe that we have combined thickness of flesh and desirable shape with earliness, productivity, and adaptability to every part of the country. It most closely resembles California Wonder but is a week or ten days earlier in Southeastern Pennsylvania, and farther north this valuable characteristic is intensified. It is remarkably productive, setting an unbelievably heavy crop of peppers under almost any conditions. Plants are 15 to 18 in. tall, erect, bearing fruits upright in large clusters.

The fruit is blocky, just the right size and shape for stuffing, measuring 3 to 3½ in. in diameter and 3½ to 3¾ in. in length. It is nearly round in cross section, with 3 or 4 lobes, a well-rounded blossom end entirely without objectionable deep creases, and is glossy dark green turning bright red when ripe. The flesh is ¾ in. thick, tender, crisp, and, of course, always sweet. Ready in 67 days from time of setting out the plants.

Pkt. 15¢; ⅛ oz. 75¢; ¼ oz. \$1.35; oz. \$5.00.

## 82 Pole Bean

### White Seeded Kentucky Wonder RUST RESISTANT

**64 days.** A new early pole bean with distinct advantages over other varieties now offered. It is highly resistant to at least one form of the rust disease; entirely stringless when young, and even after the beans have grown to full size in the pod it has only slight strings. The seed is white. The vine is vigorous and climbs well and the foliage is dark green. Pods are 7 to 7½ in. long, thick, smoother than Kentucky Wonder, dark green, and have that unexcelled pole bean quality. Extra early for a climbing bean and productive over a long season. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.35; 10 lbs. or more @ 25¢ per lb.**

## 35 Edible Soy Bean—Bansei

**96 days.** The soy bean is one of the most nutritious of all plant products, contains approximately 20% fat and 40% protein, and gives a tremendous yield of food from a small space.

If you have been thinking of soy beans only as feed for livestock, plant some Bansei this year and add an entirely new vegetable to your garden list in the future. They're easy to grow, fabulously productive, drought resistant, not attacked by the Mexican bean beetle, attractive on the table, and easy to eat. Soy beans may also be dried for winter use.

Plant, fertilize, and cultivate like bush limas, thinning to 1 ft. apart in the row. Pick when pods are well filled but still green. Ask for cooking instructions when ordering seeds.

**Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.25; 10 lbs. or more @ 40¢ per lb.**

## 668 Okra

### Clemson Spineless

*All-America Bronze Medal Winner*

**56 days.** Have you ever picked okra and gotten spines in your fingers? At last here's a truly spineless variety. Clemson Spineless produces pods of the most desirable type, slim, tapering, 7 to 9 in. long and 1 in. in diameter when fully grown, dark green, grooved only slightly, and of fine quality.

Flesh is tender, crisp and delicious; seed cavities are small.

## 316 Sweet Corn—Burpee's Delicious

**91 days.** Is white corn sweeter than yellow? Since it's a matter of personal taste, we can't say. However, be sure you've compared Burpee's Delicious very carefully with the best of the yellow varieties before you make your conclusions. We think that Delicious tops the white varieties for quality.

Delicious matures in about 91 days from planting. The plant grows 5 to 7 ft. tall and produces an ear 7 to 8 in. long and  $1\frac{1}{2}$  to  $1\frac{3}{4}$  in. in diameter, filled to the top with 12 or 14 rows of pearly white kernels, closely and evenly set.

A husky, productive, and uniform plant, a most attractive ear, and, above all, the very finest table quality. We recommend Delicious sweet corn to all our customers.

## 1085 Tomato—Sweetmeat

**66 days.** An outstanding second early pink tomato which should replace many of the varieties in use at the present time. Fruits are smooth, uniform, semi-globular in shape and average about 5 ozs. in weight. They ripen evenly throughout and are quite free from cracking. Flesh is solid, fine grained and of delicious flavor. Heavy vines give ample protection to the fruit. A Burpee introduction, developed at our Michigan breeding grounds.

*Our special strain of Red Cored Chantenay*

**70 days. Tops:** strong, 16 to 18 in. tall. **Roots:** 5 to  $5\frac{1}{2}$  in. long and  $2\frac{1}{4}$  in. in diameter at the shoulder, gradually tapering and abruptly stump rooted, very smooth, quite uniform; deep orange skin and flesh with a small, indistinct core.

The finest of the Chantenay type, suitable for bunching or for winter storage. Short enough to grow straight on even the heavier soils, easy to pull, and excellent for the table in all stages. You won't find a better all-around carrot than Goldinhart. Popular with canners, commercial growers and home gardeners.

## 531 Lettuce—Imperial 44

**84 days.** While this strain was bred by the late Dr. Ivan C. Jagger, the famous lettuce and cantaloupe breeder of California, the true use of Imperial 44 was discovered by Dr. J. E. Knott of Cornell University. Imperial 44 is a low-growing crisp head with thick, heavily savoyed, dark green leaves. The head is deep, 5 to  $6\frac{1}{2}$  in. in diameter, very solid, and weighs  $1\frac{1}{4}$  lbs. under good conditions. Such a sensational and dependable header in the East that the supply of seed last season was far short of the demand for it. A sure header. White seeded. Pkt. 20¢; oz. 40¢; 4 ozs. \$1.20;

**84 days.** This New York strain has shown wider adaptation than Imperial 44 and will grow to larger size under some conditions. The frame is larger than that of Imperial 44 and the leaves are lighter green. It is well adapted to the East and South and will head where other strains of New York fail completely. Known as "Florida Iceberg" it is being grown in Florida on a large commercial scale. It is the only New York strain with black seed.

## Follow the Bull's Eye ☉

If you are in doubt as to which varieties to choose, make your selection from those marked with the bull's eye ☉. They have been found most satisfactory throughout the country.

# BRUSSELS SPROUTS

More delicate in flavor than cabbage. Sow the seed thinly in rows early in June and transplant to rows 3 to 4 ft. apart in the garden or field. When the sprouts begin to form, remove the lower leaves to force all nourishment sent to the lower stem into the sprouts. The flavor and quality of the sprouts are greatly improved by frost. One pkt. will sow 75 ft. of row; an oz. 500 ft.

**162 Burpee's Danish Prize ☉ 125 days.** Strong-growing, robust variety of large, solid, round sprouts set thickly on nearly the entire length of the tall stems. Sprouts all mature at about the same time.

# GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before

they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.; 60 lbs. for one acre.

## 10 Burpee's Stringless Green-Pod ☉

*Has the Most Delicious Flavor of all Green-Podded Beans*

**49 days.** The attractive, rich green pods are about 6 in. long, slightly curved, and are so thick, even when quite young, as to be double-barreled, and when fully grown, the pods are meaty and juicy, lacking the faintest signs of any strings. Always tender, brittle, and of the finest flavor. The plants

are medium large, of somewhat spreading growth, with dark green foliage; they are of strictly bush form. Enormously productive. Noted for their hardiness and extreme earliness. Seeds are a dark coffee-brown color.

Burpee's Stringless Green-Pod has long been considered the standard of quality for all beans, regardless of type. It has been used by plant breeders for many years in the development of other beans, but its quality and tenderness have never been duplicated. A favorite for home use. **Pkt. 10¢; 1/2 lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.30; 10 lbs. or more @ 24¢ per lb.**

# WAX OR YELLOW-POD BUSH BEANS

Wax-Pod Bush Beans share with Green-Pod Bush Beans all the qualities that make them one of the first requirements of every gardener and grower. Wax Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home garden. The planting information given for Green-Pod Bush Beans applies to the Wax Beans as well. The bushes range in size from 12 to 20 in. tall.

## 33 Burpee's Brittle Wax ☉

**52 days.** Another quality Burpee variety. Plants are of medium size, erect, leafy, and very productive. The attractive pods measure  $5\frac{1}{2}$  to  $6\frac{1}{2}$  in. in length and are clear, light waxy yellow in color, round, slightly curved, and quite smooth. There is no trace of string or fiber at any stage of growth. Flesh is tender, brittle, and of fine flavor.

The kidney-shaped seed is pure white with irregular black markings around the eye. The many desirable features of Brittle Wax, which include wide adaptability to climatic conditions, attractive appearance of both pods and plants, and exceptional quality, have made it the most widely planted of all wax-podded bush beans. Equally desirable for home uses, for market and for large canners. If your plantings have never included Brittle Wax, you should give it a trial. Order early, for it is so popular with both home and commercial growers that the demand for seed frequently exceeds the supply.

Black-seeded. The habit of the plant is free branching, sturdy and upright, every branch carrying a heavy crop of the magnificent pods. Valuable for its productiveness and disease-resisting qualities.

## 40 Davis White Stringless Wax

**52 days.** This desirable bean, while it has all the fine qualities of the original Davis Wax, is quite distinct as it is entirely stringless. Pods average 6 in. long, are waxy yellow, flat, and the quality and flavor are delicious. Unequalled for the home or market garden. Very productive. The white seed may be used for dry shell beans.

## 46 Yellow Bountiful Wax

**52 days.** Rich, waxy golden yellow, flat, stringless pods which are slightly curved and average about  $6\frac{1}{2}$  in. in length. Very productive and as nearly disease-resistant as it is possible for a bean to be. The pods are of delicious flavor, finest quality and develop their golden yellow color early in their growth. The seeds are black when ripe.

## 55 Burpee's White Wax (Stringless)

**60 days.** White-seeded, round-podded wax bean of really choice quality. Bears attractive, well-formed, 5 in. pods continuously for many weeks. The bright lemon-yellow pods are straight, brittle, meaty, tender, and entirely stringless at all stages of growth. Seeds, being large and pure white, are desirable as shell beans. The seeds of any other beans can, of course, be used for baking, but the white-seeded varieties are usually preferred for this purpose.

## 44 Burpee's Kidney Wax Bush Bean ©

**52 days.** Outstanding in every way. This Burpee introduction is pronounced by many the most tasty of all beans. Pods are almost straight, broad, yet quite thick, meaty, and entirely stringless at all stages of growth; 6 to 7 in. in length,  $\frac{1}{2}$  in. broad,  $\frac{3}{8}$  in. thick, and of a bright lemon-yellow, reflecting their tenderness and delicate flavor. Popular for canning. The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color and their absolute freedom from strings; plants are noted for their great prolificness. They are strong growers, forming upright bushes 18 to 20 in. in height. Seeds are white with brownish black eye. **Pkt. 10¢;  $\frac{1}{2}$  lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.40; 10 lbs. or more @ 26¢ per lb.**

The straight, lemon-yellow pods are broad and flat, 5 in. long, stringless, brittle, and of good quality. Profuse bearer. Especially suitable for the home garden or early market. For the size of plant it is very productive. Other features are that it reaches the peak of its season very quickly and is immune to rust and disease. **Pkt. 10¢;  $\frac{1}{2}$  lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.40; 10 lbs. or more @ 26¢ per lb.**

## 24 Giant Butter or Fava Bean

**85 days.** Giant Butter or Fava Beans are much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and quite broad, and contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way. Becoming very popular. Kentucky Wonder Pole Bean

# POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 5 to 8 beans around each pole; one packet of seed is enough for 20 poles; 1 lb. of seed for 100 poles. When plants are well established, thin to 3 or 4 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

## 72 Kentucky Wonder or Old Homestead ©

**65 days.** We prefer this to most other green-podded pole beans. It is early, climbs well, and bears a heavy crop of large green, curved pods, 7 to 9 in. long. They are thick and meaty, tender, brittle, and of good quality, showing slight strings as the pods reach full size. Though thick, they appear slender on account of their great length.

## EDIBLE SOY BEAN

### 35 Bansei

**96 days.** Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. The food value is very high because of the fat and protein content. The Bansei variety is one of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. Seeds are bright green while young and yellow when mature. Ask for cooking instructions when ordering seed.

Pkt. 15¢; 1/2 lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.25; 10 lbs. or more @ 40¢ per lb.

# POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden space. They mature somewhat later. Set the poles 4 ft. apart each way and place 6 to 8 seeds around each pole with the eyes down, covering with 2 in. of fine soil. Later thin to 2 or 3 plants to a pole. Do not plant until the ground is thoroughly warm, about the middle of May in the vicinity of Philadelphia. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row. All Lima Beans prefer a warm, sandy loam soil enriched with well-rotted stable manure; wait until soil is warm and weather settled before planting.

## 105 Burpee's Best Pole Lima ☉

**92 days.** The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb ten to twelve feet under average conditions, and produce pods along its entire length in clusters of 4 to 8. The pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch thick. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest it to those who have been growing this older variety.

Pods measure from 7 to 8 in. in length and from 1½ to nearly 2 in. in width, and are produced freely in clusters of from 4 to 8 until the vines are killed by frost. The green shell beans are extra large and of the most delicious flavor. 10 to 12 ft.

The pods are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 to 8 in. long and 1¼ in. wide.

# BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Jackson Wonder. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. 100 ft.; 60 lbs. to an acre.

## 65 Burpee's Fordhook Bush Lima ©

*Introduced by Burpee and named for Burpee's Fordhook Farms*

**75 days.** Burpee's Fordhook Bush Lima Bean is known and grown wherever beans are planted. It is a Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod usually holds 4 large, plump beans which remain green for a long time.

The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. On our own Seed Farms we grow enormous quantities of this bean which we ship to our customers in every state in the Union. Sales are heavier each year due to the ever-increasing popularity of Fordhook Bush among home gardeners and market growers. For a Pole Lima of the Fordhook type, plant Burpee's Best.

## 64 McCrea Bush Lima (Miniature Fordhook)

**76 days.** McCrea Bush is just what we have been waiting for—a Miniature Fordhook. To give an idea of the size of the beans themselves—the Fordhooks listed above are so large that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved, and contain from 3 to 5 plump green beans of true potato type. The unusually delicious flavor of this Miniature Lima and the fact that the beans retain a green tint when cooked have already made it a popular favorite with home and market gardeners. Canners, too, have found it most desirable, for the plump, thin-skinned beans have an unusually sweet flavor, different from any other lima, and they do not break up in the can. As they retain their green color when cooked, they make a nice appearance when served.

Upright plants bear an abundance of pods from 4 to 4½ in. long, each containing 3 or 4 medium-sized beans. The hardiness of this variety, along with its excellent quality, have made this bean popular wherever grown. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.40; 10 lbs. or more @ 26¢ per lb.

## 63 Burpee's Improved Bush Lima ©

*Another World Famous Burpee Introduction*

**75 days.** The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The seeds and pods are larger, and the plants are more productive. Plants of Burpee's Improved are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long, and 1 to 1½ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.45; 10 lbs. or more @ 27¢ per lb.**

## 60 Burpee's Bush Lima

**78 days. The original dwarf, large-seeded Bush Lima.** First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long and contain 3 or 4 large beans of excellent quality.

**68 days. Improved Henderson Bush or Baby Lima.** One of the earliest maturing bush lima beans, so is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, each containing 3 or 4 plump beans of delicious, sweet, buttery lima flavor. Plants are very prolific, and while they begin to bear very early, they will continue to produce until killed by frost.

### Follow the Bull's Eye

We have used this mark © for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark ©, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class**. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

# TABLE BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; one oz. for 100 ft.; use 4 to 6 lbs. for an acre.

# 272 BURPEE'S FORDHOOK CELERY

Burpee's Fordhook Celery has a most delicious, crisp, nutty flavor unequalled by any other variety. It is, without question, the best fall and winter celery.

The stalks are unusually thick, always crisp and juicy, and entirely free from stringiness. When blanched, they are a beautiful silvery white with a full tender heart showing a tinge of light buttery yellow.

Plants are stocky, upright and 15 to 18 in. high. Because of their medium height and compact growth, they are more easily blanched than taller varieties. Fordhook is one of the best keepers of all celery; plants will remain in perfect condition throughout the winter and way into the following spring.

More Fordhook Celery is being grown now than ever before; its flavor, quality and tenderness cannot be surpassed. Try it.

Our special strain of Fordhook Celery is grown on our Western farms, where soil and climatic conditions are ideal for the production of plump, vital seeds. All plantings are made from yearly selections to maintain the high quality for which our strain is noted.

## SAVOY CABBAGE

**209 Perfection Drumhead © 90 days.** The best crumpled or savoyed leaf cabbage. Enjoys great popularity on account of its tasty flavor. The large round heads are somewhat flattened and very heavy. The deep green, crinkled outer leaves enclose the tender, light green heart. It matures late in the fall and will keep all winter in good condition.

Pkt. 15¢; ½ oz. 55¢; oz. \$1.00; 4 ozs. \$3.00.

# CAULIFLOWER

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Semesan to prevent damping off.

## 253 Burpeeana ©

**82 days.** This is Super Snowball as offered by Burpee. It stands out as the most valuable cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing just as early as Burpee's Fordhook. Dependable, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds. A prize cauliflower for the home gardener as well as the market grower. Pkt. 25¢; 1/4 oz. 80¢; 1/2 oz. \$1.35; oz. \$2.35; 4 ozs. \$7.80; 1/2 lb. \$14.50; lb. \$28.00.

## 255 Burpee's Ideal Snowball ©

Plants are dwarf; heads grow 6 in. and more in diameter and have a smooth, compact, snow-white curd of the best quality. They weigh about 2 lbs. each and often more if grown under favorable conditions. Pkt. 15¢; 1/4 oz. 55¢; 1/2 oz. \$1.00; oz. \$1.65; 4 ozs. \$5.55; 1/2 lb. \$10.30; lb. \$20.00.

## 244 Burpee's Best Early

**85 days.** Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. Grown in good soil, the snow-white heads of extra-fine quality measure 8 to 10 in. across, and mature extra early. ## 245 Burpee's Dry Weather ©

**95 days.** Though cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads ten days later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage. Individual heads weigh 2 lbs. each. Pkt. 15¢; 1/4 oz. 60¢; 1/2 oz. \$1.10; oz. \$1.75; 4 ozs. \$5.85; 1/2 lb. \$10.90; lb. \$21.00.

*Chihli Chinese Cabbage*

# CHINESE OR CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. # CARROTS

Sow seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow about the middle of June, which will make full size roots before cold weather sets in. 1 pkt. of seed will sow 50 ft. of row; 1 oz. 200 ft. 3 lbs. for one acre.

# CELERY

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or celery paper may be used to blanch the stalks. One pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; 4 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Cuproside or Semesan.

## 272 Burpee's Fordhook ©

*The Finest Flavored Celery*

**130 days.** Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of the variety. **Pkt. 25¢; 1/2 oz. 35¢; oz. 60¢; 4 ozs. \$1.85; 1/2 lb. \$3.45; lb. \$6.25.**

## 262 Burpee's Golden Self-Blanching ©

*Selected French-Grown Seed—Original Dwarf Strain*

**120 days.** The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown especially for us by one of the best growers in France. **Pkt. 20¢; 1/2 oz. 45¢; oz. 85¢; 4 ozs. \$2.60; 1/2 lb. \$4.80; lb. \$8.75.**

### 260 Golden Self-Blanching

**115 days.** This is the American-grown seed produced from the dwarf French-grown stock. We do not know of any type of celery that has been more of a favorite than Florida Golden. It has the long first joint and long full heart so much desired, and stands cold weather well without developing soft stalks. The heart is a light golden color; tender and crisp; nutty flavor. **Pkt. 15¢; 1/2 oz. 45¢; oz. 80¢; 4 ozs. \$2.40; 1/2 lb. \$4.40; lb. \$8.00.**

### 266 White Plume

**112 days.** The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. A favorite for fall and early winter use. Not suitable for winter storage. **Pkt. 10¢; 1/2 oz. 20¢; oz. 30¢; 4 ozs. 90¢; 1/2 lb. \$1.40; lb. \$2.50.**

**The average number of days** required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season and locality.

They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. ## CELERIAC or Turnip-Rooted Celery 293 Giant Prague

**120 days.** The edible portion is the large, thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Frequent cultivation is necessary and occasional waterings are desirable. Start the seed in boxes indoors, and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching. The flavor of celeriac is similar to that of celery. Highly appreciated in European countries, and becoming most popular in the United States; more so when it becomes better known.

# SWEET CORN

Plant the seed after all danger of frost has passed, in rows  $2\frac{1}{2}$  to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make succession sowings every 10 to 14 days until July 10—Sweet Corn maturing in the cool fall weather is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels is then insured. One pkt. of seed will plant 100 ft. of row; 1 lb. 350 ft.;  $12\frac{1}{2}$  lbs. for one acre.

## YELLOW VARIETIES

The cob is small. For quality, it cannot be surpassed. # CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each

hill, and cover with  $\frac{1}{2}$  in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Arrow Garden Spray and Slug Shot Dust. Treat seed with Cuproside. See page 125 for explanation of white spine and black spine.

# LOOSEHEAD OR CUTTING LETTUCE

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing in the greenhouse during winter.

# WATERMELONS

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart.

Place 6 to 8 seeds in a circle in each hill, and cover  $\frac{1}{2}$  in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 12 hills; 1 oz. 25 hills; 3 to 4 lbs. for one acre. In northern states, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

## ONION and GARLIC SETS

*For larger quantities, write for special prices*

It pays to plant sets of the very best quality which have nothing in common with the cheap unreliable kinds so often offered. Please write for quotations on large quantities as prices vary with the market. One lb. of onion sets will plant 100 ft. of row; 250 to 325 lbs. are needed for one acre. Plant as early in the spring as possible.

### 9969 Ebenezer or Japanese ©

The flesh is yellowish white.

# ONIONS

The soil best suited to grow a good crop of onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One pkt. of seed will sow about 50 ft. of row; 1 oz. 200 ft.; 4 to 5 lbs. one acre. Japanese Bunching and White Welsh, which are used as green onions or scallions, are best planted in July for harvest the following spring.

## 682 Sweet Spanish ©

*Utah Strain*

**110 days.** The large, globe-shaped Spanish Onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild and sweet—excellent for eating raw or boiled. Utah Sweet Spanish grows to very large size, is remarkably uniform, globular, light yellow skin and pure white, firm, crisp, and tasty flesh. Although no onions of this type will keep as well as American types, such as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. Onions of the Spanish type grow to the largest size when they are planted to form their bulbs during the short days of spring or fall. In northern states, seed is usually started indoors.

# PEPPERS

Pepper seed should be sown in a hotbed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. One pkt. of seed will produce about 100 plants; 1 oz., 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Days to maturity are from field setting of plants. Treat seed with Cuprocide or Semesan to prevent damping off.

## 816 California Wonder ☉

*Improved Market Gardeners' Strain*

**75 days.** A special strain which we have produced at Fordhook Farms. Number one quality pepper for the country south of the Pennsylvania-New York line. California Wonder is all that you could ask for in a stuffing pepper—good size, blocky form, remarkably thick walls, sweetness, tenderness, and good flavor. Because of the thickness of its flesh, it will stand packing, shipping and handling without bruising or breaking. Peppers are about 4 in. long and 3 to 3½ in. in diameter, 3 and 4 lobed, very smooth, glossy green, turning to bright crimson when ripe. For regions having short seasons, we recommend Windsor A.

# RADISHES

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering  $\frac{1}{2}$  in. deep. Thin plants to stand 1 to  $1\frac{1}{2}$  in. apart in the row. Make succession plantings every week until early summer, then resume one month before frost. This applies to **spring** and **summer** radishes; seed of **winter radishes** is not sown until June. One pkt. will sow about 20 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. for one acre.

## SPRING VARIETIES

### 910 Burpee's Red Giant ☉

**29 days.** This remarkable radish combines large size with tender crispness and mild flavor as no other variety does. The roots, even though they grow to the enormous size of  $1\frac{1}{2}$  in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red. The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when  $\frac{1}{2}$  in. in diameter; pick it ten days later when the roots measure  $1\frac{1}{2}$  in. or more—it's always crisp, sweet and tender. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢;  $\frac{1}{2}$  lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00.

It is a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the largest radishes see that the soil is fertile and deeply prepared. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢;  $\frac{1}{2}$  lb. 50¢; lb. 85¢; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

Our stock of this popular variety is perfectly uniform and remarkably fine. While the white-tipped Scarlet Turnip Radish has long been a favorite, the Sparkler strain is unusually desirable. A very attractive radish for bunching or market. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢;  $\frac{1}{2}$  lb. 45¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.60.

## 1005 New Zealand © The Hot Weather Spinach

**70 days.** This plant, when prepared for the table, so greatly resembles spinach in appearance and flavor that most people will not be aware of the difference. Some consider the flavor even better than that of regular spinach. Makes strong plants which will resist heat and give an abundance of rich green foliage all during the summer and fall when true spinach fails. Sends out fresh growth continuously after being cut so that a supply of "greens" may be had until frost destroys the plants. It is not hardy and cannot stand frost. Pkt. 10¢; oz. 15¢; 4 ozs. 25¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.40; 10 lbs. \$4.50.

## SWISS CHARD

Swiss Chard replaces spinach during the hot weather and is as easy to grow as beets. Sow the seed during April or May in rows 16 to 20 in. apart and thin the seedlings to stand 1 ft. apart in the row. Swiss Chard is a healthy, nutritious vegetable; the leaves are prepared like spinach, the white mid-ribs like asparagus. A pkt. will sow 25 ft. of row; an oz. 100 ft.; 4 lbs. per acre.

# TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with  $\frac{1}{4}$  in. of soil. When plants are about 2 in. tall, transplant to stand

4 in. apart in the row or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. One pkt. will produce about 300 plants; 1 oz. 2000 plants; 2 ozs. will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocide to prevent disease.

### 1092 Burpee's Globe (80 days) ☉

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; 4 ozs. \$2.70; ½ lb. \$4.95; lb. \$9.00. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large sized, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Sensational all-purpose tomato; winner of the All-America Award of Merit. Excellent for home and market garden.

### 1068 Gulf State Market (73 days)

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00. Main-crop, pink-fruited tomato; globe-shaped, medium sized, smooth, and thick skinned. Fruits set in clusters of 5 to 7. The vine makes a rather open growth, allowing the sun to ripen the fruits evenly.

### 1117 Burpee's Self-Pruning (73 days)

Pkt. 15¢; ½ oz. 30¢; oz. 50¢; 4 ozs. \$1.50; ½ lb. \$2.75; lb. \$5.00. The limited branching habit makes it possible for the plant to throw all its strength into fruit production, and consequently Burpee's Self-Pruning is an exceptionally heavy cropper. The tomatoes are perfectly smooth and very solid, of handy size, with an even-colored, glossy, bright pinkish red skin. Flesh is juicy and of sub-acid flavor.

If you grow commercially, send for a copy of **Burpee's Blue List**. It quotes special prices for seeds in large quantities such as truckers and market growers use.

### 1120C Bonny Best, Certified ☉

(66 days) Pkt. 15¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.35; ½ lb. \$2.45; lb. \$4.50. *Sweetmeat*

## 1085 Sweetmeat (66 days) ☉

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; 4 ozs. \$2.25; ½ lb. \$4.10; lb. \$7.50. An outstanding second early tomato of our own, developed at our Lansing, Michigan, breeding station. One of the handsomest pink tomatoes we have ever seen, semi-globular in shape, weighing 5 ozs. or more. They ripen evenly throughout and are quite free from cracking. Heavy vines give ample protection to the fruit. Flesh is solid, fine grained and of delicious flavor.

## 1101 Chalk's Early Jewel (68 days)

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$1.80; lb. \$3.25. Fruits are nearly round and slightly flattened; very deep, solid, and meaty, with only a few quite small seed-cells. The color of the skin is an attractive rich crimson-scarlet and the flesh is a deep scarlet-red. Chalk's Early Jewel is known and appreciated wherever early tomatoes are grown.

## 1095 Burpee's Dwarf Giant

(88 days) Pkt. 15¢; ½ oz. 35¢; oz. 60¢; 4 ozs. \$1.80; ½ lb. \$3.30; lb. \$6.00. One of the best dwarf tomatoes; smooth, somewhat flattened, rich purple-crimson skin. Flesh is free from any hard fiber or core. The meat is fine-grained, juicy, and solid enough to stand shipping well. Highly valued by home gardeners and market growers who wish to grow a variety which can be planted closely.

## 1072C Rutgers Certified (74 days) ☉

Pkt. 15¢; ½ oz. 30¢; oz. 50¢; 4 ozs. \$1.45; ½ lb. \$2.65; lb. \$4.85. A commercial variety of great importance in most of the Eastern and Southern states. It is suitable for canning, juicing, and for long distance shipping. Large fruit size, 6½ to 7½ ozs., makes it favored over many other popular tomatoes. Globular in shape, slightly flattened, smooth, bright red and with heavy walls and small cells. Vine is vigorous, heavy, and wilt-resistant to a high degree.

## 1072 Rutgers (74 days)

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$1.90; lb. \$3.50. Grown from stock seed released by the New Jersey Agricultural Experiment Station.

## 1093 Dwarf Stone (83 days)

Pkt. 10¢; ½ oz. 30¢; oz. 50¢; 4 ozs. \$1.45; ½ lb. \$2.65; lb. \$4.85. Very choice tomato of dwarf habit, making a distinct, tree-like growth which requires no training. Large smooth fruits of a bright scarlet-red color; average 4 in. in diameter and are about 3½ in. deep. They are juicy, fleshy, exceedingly meaty, and contain few seeds.

## 1108 Burpee's Matchless (73 days) ☉

### Improved Market Gardeners' Strain

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$1.80; lb. \$3.25. The best large, main-crop tomato. No other main-crop tomato has ever equalled Matchless in size, color, and productiveness. It has held this enviable position for many years. Strong, vigorous grower, with sturdy vines which produce an enormous crop of large, handsome fruits that are meaty, rich scarlet-red color, perfectly smooth, firm, solid and noted for their extremely long-keeping qualities. The flavor of Burpee's Matchless is deliciously sub-acid and tasty. The uniform color of the skin gives the tomatoes a most attractive appearance; this and the quality of the fruits help to sell them on sight.

## 1112 Trucker's Favorite

(85 days) Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00. This Burpee introduction is an excellent large variety of remarkable solidity, attractive appearance, and highest quality. Fruits grow 4 in. across and 2½ in. deep. The smooth skin is deep purple-red.

Vines are very large, widely branched, and well covered with foliage. Fruits are deep, flattened, smooth and of excellent color, weighing from 6½ to 7½ ozs. The quality is very good for all uses.

## 1074 Stone (81 days)

Pkt. 5¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 85¢; ½ lb. \$1.25; lb. \$2.25. Grown from the same stock seed and under the same conditions as the certified seed offered above.

## 1115 Beefsteak (83 days)

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; 4 ozs. \$1.75; ½ lb. \$3.20; lb. \$5.85. Resembles Ponderosa in many ways except that the fruits are a deep scarlet-red color. The vigorous vines produce a great abundance of extra large size fruits which are more or less ribbed. The flesh is a beautiful deep scarlet, juicy, solid, and has a rich sub-acid flavor. ## 1114 True Giant Ponderosa◎

(81 days) Pkt. 15¢; ½ oz. 30¢; oz. 55¢; 4 ozs. \$1.65; ½ lb. \$3.00; lb. \$5.50. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are unusually small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeably mild flavor. People who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor and a good deep purplish pink color. Essentially a home garden tomato; finds ready sale on roadside stands.

*True Giant Ponderosa*

The skin is purplish scarlet, smooth, and evenly colored. The oxheart shape of the fruits is most distinct, and they are extremely solid, having few seed cells, which accounts for their enormous weight.

## 1099 The Burpee (86 days)

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; 4 ozs. \$2.10; ½ lb. \$3.85; lb. \$7.00. Where late tomatoes will mature, this large, pinkish red variety, which is exceptionally solid, juicy, tasty and most refreshing, will be popular.
